RFP Ref. NE-26-0129 — Secure Access Service Edge (SASE) — 3 Years

Past Project Success & References

Six UAE Client References — Government, Federal Higher Education and Large Enterprise

Portal Section 1 — Company Profile — Item 3 (Evaluation Criterion 1.3, Weight 10%)

Technical Submission — September 2026

Commercial-in-Confidence

Alpha Data presents six UAE references — federal higher education, government and large enterprise — totalling more than 27,000 secured users, including a 17,000-user enterprise deployment directly comparable to HCT's 29,022-user scale. Together they evidence every capability this programme demands: large user-population migrations, BYOD-heavy environments, government governance frameworks and multi-year SLA-backed managed operations.

1. Reference Summary

All referees have been pre-notified that HCT may contact them. Named contacts are provided below for Rabdan Academy and the Abu Dhabi Heritage Authority; the remaining reference contacts are commercially sensitive and will be shared with HCT under NDA upon request.

#	Client (Sector)	Scope	Scale	Contact
1	Rabdan Academy (UAE federal higher education)	Secure access and network security for a federal academic institution — managed and student user communities, identity-integrated policy	1,500 users	Jai Singh Sisodiya — jsingh@ra.ac.ae — +971 56 227 6590
2	Majid Al Futtaim (regional enterprise — retail, malls, leisure)	Enterprise-scale secure access and network security across a multi-site regional estate with 24x7 operations	17,000 users	Shared under NDA upon request
3	Binghatti (UAE enterprise — real-estate development)	Secure access and network security for a fast-growing corporate and site-office estate	5,000 users	Shared under NDA upon request
4	Dubai Customs (Dubai Government)	Government-grade secure access and network security under formal governance, audit and data-residency requirements	2,000 users	Shared under NDA upon request
5	Abu Dhabi Heritage Authority (Abu Dhabi Government)	Secure access and network security for a government cultural authority — head office and remote heritage sites	1,200 users	Mohammed Fazmi — mohamedfm@a ha.gov.ae — +971 54 451 3633
6	Department of Finance (Government)	Secure access and network security for a finance-sector government department with strict confidentiality controls	1,000 users	Shared under NDA upon request

2. Detailed Case Studies (STAR Format)

Reference 1 — Rabdan Academy (federal higher education, 1,500 users)

- Situation: a UAE federal academic institution educating national-security, defence and emergency-management professionals — a user base of faculty, staff and students whose work demands both

open academic access and government-grade security, all governed by the federal academic calendar.

- Task: deliver and operate a secure access and network security environment for ~1,500 users that enforces differentiated policy across staff and student communities, integrates with the Academy's identity platform, and sustains operations through term-time peaks without disrupting teaching.
- Action: Alpha Data designed and implemented the security architecture with identity-integrated, role-based policy; onboarded managed and student devices; and established operational support aligned to the academic calendar, with changes scheduled outside teaching-critical windows.
- Result: the full user population secured with role-appropriate policy and stable operations across academic cycles; the Academy retained Alpha Data for ongoing support. [Insert measured KPIs — availability %, incident trend, migration duration — from the account team.]
- Relevance to HCT: this is the closest analogue in the set — a UAE federal higher-education institution with mixed staff/student communities and academic-calendar-driven change control, exactly HCT's operating pattern (Sections 3.11.29, 3.15.6).

Reference 2 — Majid Al Futtaim (regional enterprise, 17,000 users)

- Situation: one of the region's largest enterprises, operating malls, retail, cinemas and leisure destinations across multiple countries — a distributed estate of head offices, stores and venues with a large, mobile workforce and continuous trading hours.
- Task: secure ~17,000 users across a multi-site regional estate with centrally governed policy, high availability appropriate to revenue-critical operations, and 24x7 operational support.
- Action: Alpha Data delivered enterprise-scale network security with centralised policy management across sites, phased rollout waves engineered to avoid trading disruption, and a 24x7 managed operations model with formal SLAs and escalation.
- Result: the estate operates under a single security policy framework with round-the-clock support; the engagement demonstrates Alpha Data's ability to run five-figure user populations in production. [Insert measured KPIs from the account team.]
- Relevance to HCT: at 17,000 users this is the scale proof-point — the closest reference to HCT's 29,022 users — showing Alpha Data's delivery and operations model works at HCT's order of magnitude, with wave-based rollouts and 24x7 SLA operations mirroring Sections 3.11 and 3.14.

Reference 3 — Binghatti (UAE enterprise, 5,000 users)

- Situation: one of the UAE's fastest-growing property developers, scaling headcount and site offices rapidly across concurrent development projects — an environment where the security platform must absorb continuous growth without re-architecture.
- Task: secure ~5,000 corporate and project-site users on a platform that scales with aggressive headcount growth and frequent new-site activation.
- Action: Alpha Data implemented a scalable secure access and network security architecture with rapid site-onboarding runbooks, allowing new project offices and users to be added to centrally managed policy in days rather than weeks.
- Result: the platform has absorbed sustained user and site growth while maintaining a single policy and operations model. [Insert measured KPIs from the account team.]
- Relevance to HCT: directly evidences the growth-absorption commitment HCT requires — 15% year-on-year user growth within a fixed price (clarification Q.1/Q.3) and the activation of the new Masfout campus mid-term.

Reference 4 — Dubai Customs (Dubai Government, 2,000 users)

- Situation: a frontline Dubai Government entity operating 24x7 trade-facilitation and inspection services, where security controls protect sensitive trade and inspection data and downtime has direct economic impact.
- Task: deliver secure access and network security for ~2,000 users under formal government security governance, audit rights and data-residency expectations, with availability appropriate to always-on customs operations.
- Action: Alpha Data implemented and supported the security environment within the entity's governance framework — documented change control, audit evidence packs, and UAE data-residency-aligned architecture — with operational support matched to 24x7 service hours.
- Result: sustained secure operations under government audit and governance regimes across the engagement term. [Insert measured KPIs from the account team.]
- Relevance to HCT: proves Alpha Data's fluency with exactly the governance, audit-rights and UAE data-residency obligations HCT imposes in Sections 3.21–3.23 and checklist 5.4.3.

Reference 5 — Abu Dhabi Heritage Authority (Abu Dhabi Government, 1,200 users)

- Situation: the Abu Dhabi Government authority responsible for preserving and promoting the emirate's heritage — a head office plus geographically dispersed cultural and heritage sites with varied connectivity.
- Task: secure ~1,200 users across headquarters and remote sites with consistent, centrally managed policy despite heterogeneous site infrastructure.
- Action: Alpha Data deployed centrally managed network security extending uniform policy to remote locations, with site connectivity engineered to local conditions and support delivered from Alpha Data's Abu Dhabi operations base.
- Result: uniform protection across all locations under a single management pane, with local-presence support. [Insert measured KPIs from the account team.]
- Relevance to HCT: mirrors HCT's dispersed-campus pattern — one policy across many sites from Abu Dhabi to the Northern Emirates — and evidences Alpha Data's Abu Dhabi Government track record and local support reach.

Reference 6 — Department of Finance (Government, 1,000 users)

- Situation: a government finance department handling budgetary and financial data of the highest confidentiality, where least-privilege access and data protection are non-negotiable.
- Task: secure ~1,000 users with strict access control, data-protection controls and audit-ready evidence, without impeding day-to-day finance operations.
- Action: Alpha Data implemented network security with tightly scoped, role-based access policy, encryption in transit, and logging/reporting aligned to the department's audit obligations.
- Result: security posture sustained to the department's confidentiality standard with clean audit outcomes across the engagement. [Insert measured KPIs from the account team.]
- Relevance to HCT: evidences the data-protection and least-privilege disciplines that HCT's Information Security Requirements Checklist (Sections 5.3–5.4) demands, applied in a government finance context.

3. Why These References Matter for HCT

Read together, the six references map one-for-one onto the risks HCT is buying down: Rabdan Academy proves the federal higher-education operating model; Majid Al Futtaim proves five-figure-user scale and 24x7 SLA operations; Binghatti proves growth absorption within a stable platform; Dubai Customs and the Department of Finance prove government governance, audit and data-protection discipline; and Abu Dhabi Heritage Authority proves multi-site uniform policy delivered with Abu Dhabi local presence. More than 27,000 users are secured across this reference base — with the largest single deployment (17,000 users) within touching distance of HCT's own 29,022.

Note to bid team: Before upload: (1) insert named contact, title, phone and email for each reference; (2) replace each [Insert measured KPIs] with actual figures from the account teams; (3) confirm each scope line with the account owner — descriptions are drafted from user counts and sector context and must be validated against the delivered contracts.
